

Rasi Organic Farms

**100%
Organic**

**VERMICOMPOST AND
ORGANIC FERTILIZERS
MANUFACTURER AND SUPPLIER**

PRODUCTS

ENRICHED VERMICOMPOST

Vermicompost can be enriched by adding Biofertilizers, Pachakaviya, Jeevamirtham, Humic Acids, EM solution, etc.,

Application:

- ✓ 1000 kg to 1500 kg per acre.
- ✓ For trees, 4 kg to 10 kg depends on the size.

ENRICHED THOLU URAM

- ✓ Tholu Uram is being added with Biofertilizers, EM Solution, Panchakaviya, etc.
- ✓ Enhance soil fertility, prevents disease-causing microbes like fungal and bacterial plant pathogens.

Application:

- ✓ Two to three Tons of Enriched Tholu Uram per acre shall be applied on soil immediately before any farming, especially for organic farming.

GOAT MANURE POWDER

The best way to enrich the soil in garden areas is to use goat dung. The powdered form makes it perfect for applying directly to flower gardens and vegetable gardens.

ENRICHED COCOPITH

- ✓ Low EC Cocopith is being enriched by adding Pseudomonas, Trichoderma viride, vermicompost, organic manures, NPK, etc.
- ✓ Enriched cocopith will enhance soil fertility and softness.

Application:

- ✓ 1000 kg to 1500 kg per acre.
- ✓ For trees, 4 kg to 10 kg depends on the size.

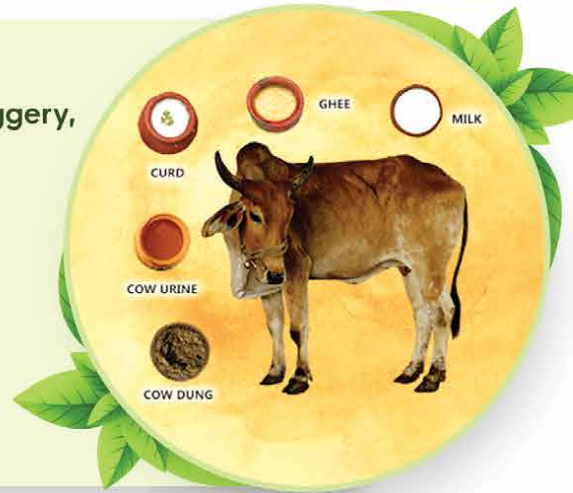

PANCHAGAVYA

Panchagavya is a mixture of cow dung, cow urine, milk, curd, jaggery, ghee, banana and tender coconut. It stimulates plant growth and renders immunity.

Application:

- ✓ 3 liters of Panchagavya to 100 liters of water is ideal for all crops. I.e 300 ml to mix with 10 liters of water.
- ✓ Panchakaviya can be mixed with irrigation water at 20 liters per acre either through drip irrigation or flow irrigation.

AMINO ACIDS

Amino acids are fundamental ingredients in the process of protein synthesis, which increases plant yield and overall crop.

Application:

- ✓ For Sprayer application: 50 ml of Amino Acid mix with 10 liters of water.
- ✓ For Soil application: 300 ml per acre
- ✓ For Coconut trees: 100 ml Amino Acid mix with 10 liters of water and pour around the tree.

JEEVAMIRTHAM

Jeevamirtham is made from cow dung, cow urine, jaggery, besan flour & fertile soil. It improves soil fertility and crop productivity.

Application:

- ✓ 1 liter of Jeevamirtham to mix with 10 liters of water.

VERMI WASH

Vermi wash is a fertilizer obtained via vermiculture and vermicomposting. It is used as a foliar spray in the root zone of plants.

Application:

- ✓ For Sprayer application:
100 ml of vermi wash mix with 1 liter of water.

POTTING MIX

Potting mix is rich in nutrients, improves root penetration, and promotes water drainage to prevent overwatering. It is mainly used for terrace gardening and landscaping.

EM SOLUTION

EM solution promotes rapid biodegradation, destroys harmful microorganisms, produces fast germination of seeds, and promotes rapid plant growth.

Application:

- ✓ For sprayer application:
100 ml of EM Solution mix with 1 liter of water.
- ✓ For soil application:
one liter of EM solution added with 400 liters of water flow.

HUMIC ACID

Humic acids improve soil structure, increase the water-holding capacity of the soil, improve the drought resistance of the soil.

Application:

- ✓ 50 ml of humic acid mixed with 1 liter of water.

VIRGIN NEEM POWDER

Neem Powder enriches the soil, reduces nitrogen losses, and provides a rich source of npk and other micro nutrients.

Application:

Soil Application

- ✓ 5-10 grams per pot.
- ✓ Or 10-20 grams per square foot.

PUNGAN CAKE

Pungan cake can be used as organic fertilizer and pesticides. It is high in nitrogen.

GROUND NUT POWDER

The potash and phosphorus in groundnut powder enable flowering and higher yield in plants. It is suitable for any type of crop. It enhances the health and yield of crops.

BIO FERTILIZERS

Azospirillum, Phospho Bacteria, Pseudomonas, Trichoderma Viride, Potash Bacteria, VAM, etc.

WDC SOLUTION

WDC Solution is used for quick composting of biowastes, foliar spray as a biopesticide against most of the plant diseases.

Application:

- ✔ 300ml of WDC 1 liter of water

SEA WEED

Seaweed reduces salt content, breaks up mineralized layers, and effectively solves soil salinization caused by overfertilization.

BONE MEAL

Bone Meal stimulates root development, increases crop yield, cell division, seed growth, and ensures that plants are not stunted.
